ONE PAGER

MEV DAO project summary:

A team of developers all around the world, working 24/7 into making and researching the most profitably flashbots in crypto. To access these bots, interested investors must hold at least 1000 $MEVDAO. Holders earn from every profitable bundle passively. Also users can pay a subscription to access the bots individually.

MEV DAO development system:

We will focus on creating bots in ethereum mainnet using flashbots that use sandwiching, arbitrage, liquidations and any other system that's profitable from exploiting the mempool information.

Sandwich bot:

The team will develop a sandwich bot for uniswap V2 types of exchanges as the main bot. Then they will work on a uniswap V3 sandwiching bot.

In-house Built Snipe Bot and subscription:

We'll develop a sniping bot to capture investment opportunities faster than ever by discovering liquidity unlock events and others. The sniping bot leverages flashbots to land on the absolute best position when a token is listed. Users can subscribe to MEVDAO premium to access the sniping bot and others for independent use, essentially renting bleeding-edge developments made by us.

$MEVDAO Benefits:

Token holders earn 20% of every successful bundle made by the bots. When the team loses money from a targeted attack or an unprofitable bundle, token holders are unaffected. To receive rewards holders must stake at least 1000 $MEVDAO on the dapp.

Token holders can vote on the DAO to decide what bots to develop and what to research next.

Tokenomics:

A fixed supply of 1 million tokens. 5% buy / sell taxes. Where initially 4% will be used for marketing and growth while the other 1% for liquidity.

Users can stake their MEVDAO tokens to receive a 20% of the sandwich profits. Stake at least 1000 MEVDAO tokens to receive 20% of the profits from the sandwich, arbitrage and any other bots made by MEVDAO.

By just holding 2000 MEVDAO tokens, users have access to the premium MEVDAO bots.

Distributed 30% on the token sale, 20% for the team, 20% for marketing, 10% liquidity, 10% future raises and 10% as a reserve.

Roadmap:

Q3 2023: Creation of the whitepaper and one pager, website creation, social media setup, telegram setup and growth, first listing on uniswap, CMC and CG.
Q4 2023: Second influencer campaign, listing on 3 CEXs, reach 1000 holders. Complete the first profitable bot.
Q1 2024: Creation and polish of the sniping bot, reach 10,000 holders and influencer campaign.
Q2 2024: Improve the created bots, explore AI development and trading opportunities and next influencer campaign. Explore a funded trader program creation.
